The orientation of this cosmid is unknown.  NOTES:  Coding sequences below are predicted from computer analysis, using the program Genefinder(P. Green and L. Hillier, ms in preparation).  FEATURES  SOURCE  1.47045  / Organism="Caenorhabditis elegans" //db_xref="taxon:6239" //chromosome="TV" //chromosome="TV" //chromosome="TV" //chromosome="C17H12"  gene //gene="C17H12.6"  CDS //gene="C17H12.6" //codon_start=1 //cyidence=not experimental	Direct Submission Submitted (02-FEB-1998) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA Submitted by: Genome Sequencing Center Department of Genetics, Washington University, St. Louis, MO 63110, USA, and Sanger Centre, Hinxton Hall Cambridge CB10 IRQ, England e-mail: rw@nematode.wustl.edu and jes@sanger.ac.uk  NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.  This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone

                                                                                                                                                                                                                                                                                    In 1972. 1998 this sequence version replaced gi:3451378.

In Nov 22, 1998 this sequence version replaced gi:3451378.

In Nov 22, 1998 this sequence version replaced gi:3451378.

In Nov 22, 1998 this sequence record is sequence record is the process of the places is the not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence the place of the place
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Waterston, R.H.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Waterston, R.H.

U04910  Human immunodeficiency virus type 1 (HIV-1), isolate 662,  Baltimore, U.S.; cultured on PBMCs.  1 (bases 1 to 330)  NIAID/NIH DAIDS Variation Program.  This sample is part of a set of sequences generated through the NIAID/NIH DAIDS HIV variation program. The virus was derived from an asymptomatic individual, from Baltimore, U.S., whose route of infection is thought to be due to homosexual contact. The blood sample was taken in 1992. This env sequence clusters with HIV-1 B subtrype sequences. The full name of this sequence is HIV192US65DANIBA.OldilsED; it was presented in alignments in an abbreviated form in the April 94 Human Retro. AIDS compendium update as BJUS662D.OldilgED.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               phylogenetic analysis suggests that each AGM species is infected with a distinct subtype of SIVagm. Interestingly, the sabseus viral genome seems to be a mosaic of many viruses infecting different primate species [1]. Virus sab-1 forms a distinct lineage in the 5' end of gag, clusters closest to the HIV2/SIVam group in the 3' gag and 5' pol regions, and clusters closest to the other SIVagm lineages in the 3' pol, env and nef regions [1]. This feature was demonstrated for two viral sabseus strains, sab-1 and sab-D37 (sequenced only over the 5' end of the pol gene). Jin et al. conclude that an ancestor of the sabseus virus was a recombinant with two breakpoints: one roughly at codon 310 of gag and the other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Jin,M.J., Hui,H., Robertson,D.L., Mueller,M.C., Barre-Sinoussi,F., Hirsch,V.M., Allan,J.S., Shaw,G.M., Sharp,P.M. and Hahn,B.H. Mosaic Genome Structure of Simian Immunodeficiency Virus from West African Green Monkeys

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             yirus sab-1 was derived from a wild female asymptomatic sabaeus virus sab-1 was derived from a wild female asymptomatic sabaeus African green monkey. She was caught in her natural habitat of Senegal and susequently exported to the United States. From the point of capture and throughout the study, she was housed in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence was obtained as part of a study designed to determine the breadth of genetic variation of SIV infecting African green monkeys. With this aim in mind, Jin et al. PCR-amplified, cloned and sequenced the LTR and partial envelope region from 12 isolates (ver-1, ver-2, gri-2, gri-3, sab-1, sab-2, sab-3, sab-4, tan-1, tan-17, tan-40, and tan-49). These isolates were derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              different African green monkey species inhabiting various

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Clone HAN2/3, from which most of the sequence shown was derived, is inactive perhaps as the result of mutations leading to frameshifts in the gp41 portion of the env cds. Clone 2/2 is infectious (in MT-2 cells) and its env sequence has been inserted in this entry: bases 7100\text{-}7608 (annotated below).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The PPR isolate is approximately 91% homologous to the previously characterized Petaluma isolate. The latter infected feline kidney cells and the G355-5 cell line but replicated less efficiently on feline PBL's. In contrast, PPR productively infects PBL's but not the ther cell lines. The authors point out interesting differences that the contrast of the contrast o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gottingen,

Huet, pasteur Institute. Clone la is infectious.

The CPZ genome is more closely related to HIV-ls than to any other HIV or SIV, but it is more divergent from prototypical HIV-l than any other isolate, with possible exception of the partially characterized ANT70. CPZ is especially different with respect to the vpU gene product.

This sample is part of a set of sequences generated through the WHO Global Programme on AIDS. The virus was derived from an asymptomatic individual, from Brazil, whose route of infection is thought to be due to homosexual contact. The blood sample was taken in 1992. This env sequence clusters with HIV-1 B subtype sequences. The full name of this sequence is allowed in alignments in an abbreviated form in the April 94 Human Retroviruses and AIDS compendium update as B2BR017W.01__19CR.

The sequence below, designated 1153-1, appears to be a major form of 11 sibling sequences taken from a Boston isolate A later (1 year) isolate from the same patient, represented by 12 clones of 1236, showed relatively small variation. Sibling sequences, are available (see 1989: I-A-185).

V4C3V5-region sequences include sequences under the following v4C3V5-region sequences include sequences under the following accession numbers: M91084 - M91089 (dentist); M91090 - M91115 and M91121 - M91131 (dentist's patients); and M91132 - M91156 (Florida local controls). V3-region sequences used in [1] include: M90847 - M90853 (dentist); M90854 - M90912 (dentist's patients); and M90914 - M90966 (Florida local controls).

For related sequences, see also M90913 and M92100 - M92150.

Human immunodeficiency virus type 1

Viridae; ss-RNA enveloped viruses; Positive strand RNA virus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence in this entry is one of 12 clones over the V4C3V5 region obtained by the CDC from this Florida control sample. An alignment presenting all 12 clone sequences from the V4C3V5 region from this subject follows entry <HIVFLQ7227> in the March update to the 1991 Human Retroviruses and AIDS.

The sequences for the V4C3V5 region for this local control were generated by running the program "comp" and are the opposite sense strand of the sequences originally forwarded to the HIV Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Science (1992) In press

CDC

(Centers

for

The sequence in this entry is one of 6 clone sequences over the V4C3V5 region obtained by the CDC from this Florida control sample. An alignment presenting all 6 clone sequences from the V4C3V5 region from this subject follows entry <HIVFL08225> in the March update to the 1991 Human Retroviruses and AIDS.

All the sequences for the V4C3V5 region for this local control were generated by running the program "comp" and are the opposite sense strand of the sequences originally forwarded to the HIV Sequence

local control were

Database by the CDC. Please note that for

V3 region

do not

for this set of sequences, correspond with similar nur

es, clone numbers f

Human immunodeficiency virus type 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     M91121 - M91131 (dentist's patients); and M91132 - M91156 (Florida local controls). V3-region sequences used in [1] include: M90847 - M90853 (dentist); M90854 - M90912 (dentist's patients); and M90914 - M90966 (Florida local controls).

For related sequences, see also M90913 and M92100 - M92150. Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              region from this subject follows entry <HIVFLQ7227> in the March update to the 1991 Human Retroviruses and ALDG. The sequences for the V4C3V5 region for this local control were generated by running the program "comp" and are the opposite sense strand of the sequences originally forwarded to the HIV Sequence

An alignment presenting all 12 clone sequences from the V4C3V5 region from this subject follows entry <HIVFLQ72Z7> in the March update to the 1991 Human Retroviruses and AIDS.

The sequences for the V4C3V5 region for this local control were generated by running the program "comp" and are the opposite sens strand of the sequences originally forwarded to the HIV Sequence Database by the CDC.
The sequence in this entry is one of 12 clones over the V4C3V5 region obtained by the CDC from this Florida control sample. An alignment presenting all 12 clone sequences from the V4C3V5 region from this subject follows entry <HIVFLQ7227> in the Mar

update to the 1991 Human Retroviruses and AIDS. The sequences for the V4C3VS region for this local control were generated by running the program "comp" and are the opposite sense strand of the sequences originally forwarded to the HIV Sequence Database by the CDC.

Please note that for this set of sequences, clone numbers from the V3 region do not correspond with similar numbers from the V4C3V5

                                                                                                                                                                                                                                                   The sequence in this entry is one of 12 clones over the V4C3V5 region obtained by the CDC from this Florida control sample. An alignment presenting all 12 clone sequences from the V4C3V5 region from this subject follows entry <HTVFLQ7727> in the March update to the 1991 Human Retroviruses and AIDS.

The sequences for the V4C3V5 region for this local control were generated by running the program "comp" and are the opposite sense strand of the sequences originally forwarded to the HIV Sequence Database by the CDC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 (bases 1 to 323)

Claim 2; Pages 3-4; 39pp; English.

The present sequence represents a MurC gene encoding a Staphylococcus aureus UDP-N-acetylmuramate:L-alanine ligase (MurC polypeptide). Host cell containing an expression system comprising the MurC gene can be us for the recombinant production of the polypeptide. Agonists or the MurC polypeptide are used to treat conditions requiring increased activity of expression of the polypeptide. Antagonists, inhibitory nucleic acid or

They are also useful against Helicobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agents are useful to treat in-dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The Murc polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for raising antibodies; to identify modulators or specific receptors; in rational drug design and as an immunogen for vaccines. The Murc gene sequences are useful in antisense/ribozyme therapeutics; to detect mutant Murc gene; incorpication and mapping; to determine bacterial serotype; and for genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immunisation

Polynucleotide(s) and proteins derived from Staphylococcus aure stored on computer readable medium and used in the production o anti-S.aureus vaccines Claim 1; Page 1287-1288; 3271pp; English.

This sequence represents one of 5191 Staphylococcus aureus DNA of the invention. The DNA sequences are recorded on a computer medium, preferably selected from a floppy or hard disk, random memory (RAM), read-only memory (ROM) or CD-ROM. Homology search the S.aureus DNA sequences allows putative functions to be assituated protein-encoding or regulatory regions of commercial, ther

Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        망
                                                                                            Claim 2: Pages 4-5: 39pp; English.

Containing an expression system comprising the Murc gene can be used for the recombinant production of the polypeptide. Agonists or the Murc polypeptide are used to treat conditions requiring increased activity or expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g.

Competitive polypeptide are useful for inhibiting the polypeptide e.g.

Competitive polypeptide are useful for inhibiting the polypeptide e.g.

Chacterial (especially S. aureus) infections. They are also useful against the Helicobacter pylori infections and related cancers, ulcers and gastrititis.

Claim 2: An antibacterial agents are useful to treat in-dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacterial to matrix proteins. The Murc polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for raising antibodies; to identify modulators or specific receptors; in rational carry design and as an immunogen for vaccines. The Murc gene sequences are useful in antisense/ribozyme therapeutics; to detect mutant Murc gene; for chromosomal mapping; to determine bacterial serotype; and for genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EP-889123-A2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     function, and represents a DNA Sequence of the invention. The DNA sequences were isolated from Staphylococcus aureus WCHU29 (NCIMB 40771). Host cells containing the DNA sequences are used to produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to produce antibody and/or T-cell immune response. Antagonists of the proteins are used for the inhibition of bacterial polypeptides. Conditions which may be treated include bacterial polypeptides. Conditions which may be treated include bacterial infections, especially respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antimicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. pylori infection.

                                                                                                                                                                                                                                                                                                                                                                                                              Enterococcus faecalis. Wo9850555-A2. 12-NOV-1998. U08985. U04-MAY-1998; U08985. 14-NOV-1997; US-046609. 16-MAY-1997; US-046655. 16-MAY-1997; US-046655.
             A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. X1938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Enterococcus faecalis genome contig SEQ ID NO:286.

They can also be used for diagnosting Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16-MAY-1997; US-VAVULLE (HUMA-) HUMAN GENOME SCI INC.

The invention relates to a UDP-N-acetylmuramate:L-alanine ligase (Murc polypeptide) encoded by the S. aureus Murc gene. Host cells containing an expression system comprising the Murc gene can be used for the recombinant production of the polypeptide. Agonists or the Murc polypeptide are used to treat conditions requiring increased activity or expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g. bacterial (especially S. aureus) infections. They are also useful against
immunogen;
Synthetic.
                       MurC polynucleotides amplifying primer.

                                                                                                                                                                                                                                                                            amplification of the Murc polynucleotides.
sequence (Murc ORF) of the Murc gene.
Sequence 19 BP; 10 %
                                                                                                                                                                                                                                                                                                                                                        Helicobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agents are useful to treat in dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The MurC polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for raising antibodies; to:identify modulators or specific receptors; in rational drug design and as an immunogen for vaccines. The MurC gene sequences are useful in antisense/ribozyme therapeutics; to detect mutant MurC gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         V99652

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a UDP-N-acetylmuramate:L-alanine ligase (Murc Copolypeptide) encoded by the S. aureus Murc gene. Host cells containing or paryession system comprising the Murc gene can be used for the CC recombinant production of the polypeptide. Agonists or the Murc CC polypeptide are used to treat conditions requiring increased activity or CC expression of the polypeptide. Antagonists, inhibitory nucleic acid or CC competitive polypeptide are useful for inhibiting the polypeptide e.g. CC bacterial (especially S. aureus) infections. They are also useful against CC thelicobacter pylori infections and related cancers, ulcers and gastritis. CC The antibacterial agents are useful to treat in-dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteriat to matrix proteins. The Murc polypeptide is also useful for CC diagnosing or prognosing a (susceptibility to) disease, for raising CC antibodies, to identify modulators or specific receptors; in rational CC useful in antisense/ribozyme therapeutics; to detect mutant Murc gene; CC immunication mad as an immunogen for varcines. The Murc gene sequences are useful in antisense/ribozyme therapeutics; to detect mutant Murc gene; CC immunication mad as an immunogen for varcines. The Murc gene sequences are immunication mad for genetic immunication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391; identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the
modification, for in-frame fusions with of the 5'-end of Ox VL cDNA. Sequence 67 BP; 16 A; 22 C; 1
                                                                                    Prod. of single chain fusion protein, pref. antibody - comprises transforming host cells, e.g. E. coli with expression constructs composed of proteins or domains, linked by spacer peptide(s) Example; Page 28; 56pp; English.

The sequence is that of the PCR primer VLI, which is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.

Claim 1; Page 1907; 3271pp; English.
Claim 1; Page 1907; 3271pp; English.
This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so the S.aureus DNA sequences allows putative functions to be assigned so
                                                                                                                                                                                                                                                                                                                                                                                                                               1327
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  that protein encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S. aureus infection. The polypeptides can also be used in a kit for the immunodetection of S. aureus in a sample. S. aureus is implicated in numerous human diseases, including cellulitis, eyelld infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating
                                                                                                                gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Computer readable medium; vaccine; S.aureus infection; immunodetection; cellulitis; eyelid infection; food poisoning; osteomyelitis; therapy; skin infection; surgical wound infection; scalded skin syndrome;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polynucleotides encoding human secreted proteins - derived from provery, pituitary, retina and colon cDNA libraries.

Claim 1; Page 113; 618pp; English.

The present sequence represents a human expressed sequence tag (EST).

The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haemostatic and thrombolytic activity, receptor/ligand activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, activity. The polynucleotide may also be useful for gene therapy.

They can be used to facilitate
for human genes transcribed in vivo. They can be used to facilitate
tagging of most human genes, for mapping locations of expressed genes
on chromosomes, for individual or forensic identification, for mapping
locations of disease-associated genes, for identification of tissue
type, and for prepn. of antisense sequences, probes and constructs.
EST00527 has a "poor" coding probability as evaluated using the
coding-region prediction program CRM. See also Q59041-Q61440.
